

Table of Contents

Chapter 1

1. Introduction
2. Weak Convergence: the fundamental theorems
3. Maximal inequalities and chaining
4. Some Results for Gaussian processes
5. Inequalities for Sums of Independent Processes
6. Glivenko-Cantelli theorems
7. Donsker theorems: uniform entropy and bracketing uniform CLT's
8. VC - theory: bounding uniform covering numbers
9. Bracketing numbers
- 10 Multiplier inequalities and the multiplier CLT
- 11 Further Developments: Material Not Covered

Chapter 2

1. Consistency of Maximum Likelihood Estimators
2. M-Estimators: the Argmax Continuous Mapping Theorem
3. Rates of Convergence
4. M-Estimators and Z-Estimators
5. Bootstrapping Empirical Processes
6. Bootstrapping M- and Z- estimators
7. Semiparametric Mixture Models
9. Further Developments: Topics Not Covered

Chapter 3

1. Azuma's Inequality and Bounded Differences
2. Isoperimetric Inequalities
3. Concentration inequalities for empirical measures
