TABLE OF CONTENTS

1. Random Vectors and Covariance Matrices.....	1
1.1. Review of vectors and matrices.....	1
1.2. Matrix exercises.....	12
1.3. Random vectors and covariance matrices.....	14
2. The Multivariate Normal Distribution (MVND).....	20
2.1. Definition and basic properties.....	20
2.2. The MVND and the chi-square distribution.....	22
2.3. The noncentral chi-square distribution.....	24
2.4. Joint pdf of a random sample from the MVND	27
3. The Wishart Distribution.....	28
3.1. Definition and basic properties.....	28
3.2. Covariance matrices of Kronecker product form.....	31
3.3. The multivariate linear model.....	34
3.4. Distribution of a partitioned Wishart matrix	39
4. The Wishart Density; Jacobians of Matrix Transformations.....	48
4.1. Jacobians of vector/matrix transformations.....	48
4.2. Jacobians of linear mappings.....	50
4.3. Jacobians of nonlinear mappings.....	54
4.4. The Wishart density.....	56
5. Estimating a Covariance Matrix.....	59
5.1. Equivariant estimators.....	59
5.2. The best fully equivariant estimator.....	60
5.3. The best GT -equivariant estimator	62
5.4. Orthogonally equivariant estimators.....	65
6. Invariant Tests of Hypotheses.....	72
6.1. Invariant statistical models and maximal invariant statistics.....	72
6.2. Invariant hypothesis testing problems.....	74

7. Distribution of Eigenvalues.....95

7.1. The central distribution of the eigenvalues of $S(S + T)^{-1}$ 95

7.2. Eigenvalues and eigenvectors of one Wishart matrix.....101

7.3. Stein’s integral representation of the density of a maximal invariant statistic.....105

8. The MANOVA Model and Testing Problem.....114

8.1. Characterization of a MANOVA subspace.....114

8.2. Reduction of a MANOVA testing problem to canonical form.....117

8.3. Related topics.....119

8.3.1. Seemingly unrelated regressions.....119

8.3.2. Algebraic formulation of block-triangular matrices.....119

8.3.3. The GMANOVA model and testing problem.....121

9. Testing and Estimation with Missing/Incomplete Data.....122

9.1. Lattice conditional independence (LCI) models for non-monotone missing data.....126

9.2. LCI models for seemingly unrelated regressions (SUR).....126

10. Group Symmetry Covariance Models.

11. James-Stein Shrinkage Estimators.

12. Unbiasedness of Multivariate Tests.

13. Admissibility of Multivariate Tests.

Appendix A. Monotone Likelihood Ratio and Total Positivity.....128

Appendix B. Some Useful Results from Matrix Theory.
